

Trail Report - April 2022

Lawrence Trail

- Historical signage in place and funded by historical society (see article in Quarterly)
- Due to extremely heavy rains in November 2021 there was flooding on the trail at the Mission Road end resulting in washout areas.
- February 2022 trail mitigation workshop took place under the guidance of Doug Fenton working to alleviate the washed out areas. About one third of the work required was completed by ten participants. The project is ongoing. (See article in next Quarterly)
- Kenwood Road end of this trail continues to be muddy during the rainy season. Attempts to lay natural tree material for matt-absorption are being experimented with.
- Two trees down on this trail were dispensed with by Rob Welsh.

Lawrence Valley Loop

- Due to extremely heavy rains in November 2021 this trail has been closed intermittently
- The meadow crossing boardwalk was significantly relocated due to flooding and although it's been put back in place it requires further attention to be more secure during future flooding. Ongoing work required.
- An overhanging, precarious tree mass was dealt with by Chris Call (a big thank you)
- A significantly large fir tree fell over the Mission Road head of this trail which now requires an alternative path to negotiate the trail entrance. The trail committee met with the property owners and a re-route has been decided upon. Work to re-jig the fencing, etc. are imminent. This new "lawn ornament" will become a point of interest! This portion of the trail is currently closed.

Dingly Dell

- The eroding bank near the Wwoofer Bridge has been dealt with - thank you Noah Bond

General Comments

- Spring trimming will commence in the next little while
- We always appreciate trail impediment reports by trail users
- As always we are thankful to the property owners who graciously share their property with the islanders
- We are grateful to anyone who would like to volunteer their services to the committee - no meetings involved!
